Deployed via
AWS Marketplace

THE CHALLENGE

Faced an urgent deadline to achieve Cybersecurity Maturity Model Certification (CMMC) Level 2 or risk losing eligibility for critical Department of Defense (DoD) contracts.

Found the 110 controls required for CMMC 2.0 Level 2 to be complex and overwhelming to implement and document without specialized expertise.

Lacked the advanced 24/7 monitoring and response capabilities needed to protect Controlled Unclassified Information (CUI) to government standards.

THE SOLUTION

Procured Vijilan's Threat Remediate service directly through the AWS Marketplace, which significantly streamlined and accelerated the entire procurement and deployment process.

The turnkey solution provided a comprehensive security program that mapped directly to CMMC 2.0 controls, including 24/7 monitoring, managed risk, and audit-ready reporting.

Vijilan's rapid onboarding and expert management enabled the contractor to become fully compliant and audit-ready in record time.

The CMMC deadline was a make-or-break moment for our business. We didn't have the time or expertise to build a compliant program from scratch. Finding Vijilan on the AWS Marketplace was a lifesaver. Their team got us deployed and audit-ready in just six weeks, and we passed our assessment without a single issue.

CEO, Defense Contractor

THE VIJILAN DIFFERENCE

Compliance-as-a-Service

We provide comprehensive solutions that map directly to complex federal frameworks like CMMC, removing the guesswork for clients.

Streamlined AWS Procurement

Offering solutions on the AWS Marketplace simplifies the buying process for government contractors and enables rapid deployment.

Rapid Time-to-Value

Our efficient onboarding and expert management allow clients to achieve critical compliance goals in weeks, not months.
