

HOW A MANUFACTURING FIRM REDUCED DOWNTIME AND SECURED OT ASSETS

CLIENT

Large Manufacturing Firm with Global Operations

KEY METRICS

99.99%
Uptime Maintained

80%
Faster Threat Containment

100%
Unified IT/OT Visibility

THE CHALLENGE

Anycybersecurity incident posed a direct threat to production lines, risking significant financial loss from operational downtime. Lacked visibility into legacy Operational Technology (OT) networks, making it difficult to detect malicious activity targeting industrial control systems.

The increasing connectivity between corporate IT and production OT systems created new, unmonitored attack vectors.

THE SOLUTION

Deployed ThreatRemediate Complete, providing fully managed XDR and active remediation to protect the corporate IT environment.

Implemented Vijilan's Managed Corelight Services to deliver deep Network Detection and Response (NDR) visibility across the sensitive OT network.

Leveraged Managed Cribl Services to intelligently manage and correlate data from both IT and OT sources, providing a unified view for threat hunting.

Vijilan's team functions as a seamless extension of our own. Their ability to manage our data with Cribl and provide active remediation has freed up my internal resources to focus on bigger picture risks. It's a true force multiplier.

CISO, Manufacturing Firm

THE VIJILAN DIFFERENCE

Expertise in Converged IT/OT

We specialize in securing complex industrial environments where uptime is critical.

Advanced NDR Capabilities

Our partnership with Corelight provides the unparalleled network visibility essential for securing sensitive OT assets.

Active Remediation

Our 24/7 SOC takes direct action to contain threats, a critical capability when every second of production downtime equals lost revenue.
