

FALCON SHIELD SOLUTION BRIEF

Managed Application Security Monitoring

Real-Time Protection for Modern Applications

Falcon Shield by Vijilan delivers fully managed application security monitoring designed to detect, investigate, and respond to threats targeting modern business applications. Powered by Vijilan's 24/7 Security Operations Center (SOC), Falcon Shield provides continuous visibility across application activity, helping organizations identify suspicious behavior, protect sensitive data, and strengthen security posture.

With expert analysts, intelligent monitoring, and seamless integration with leading platforms, Falcon Shield enables organizations to detect threats faster and respond before they impact business operations.

Key Capabilities

24/7 Application Security Monitoring

Continuous monitoring of application logs, authentication events, and user activity to identify suspicious or malicious behavior.

Threat Detection & Investigation

Advanced analytics and expert SOC analysts investigate anomalies, unauthorized access attempts, and abnormal application activity.

Real-Time Incident Response

Rapid triage, escalation, and response actions coordinated by security experts to minimize risk and reduce impact.

User Activity & Access Monitoring

Detect abnormal user behavior, privilege abuse, and suspicious authentication activity across applications.

Compliance Support

Supports regulatory frameworks by providing audit visibility and monitoring aligned with standards such as HIPAA, GDPR, and SOC 2.

Expert Security Operations Center (SOC)

Security analysts continuously monitor alerts, validate threats, and provide actionable response guidance.

Applications Covered

Falcon Shield provides monitoring coverage for widely used business and cloud applications, including:

- Microsoft 365
- Azure Active Directory
- Salesforce
- Google Workspace
- ServiceNow
- Okta
- Dropbox
- Slack
- GitHub
- Atlassian Platforms

Coverage can be expanded to include additional SaaS and enterprise applications through log integrations and API connections.

Platform Features

AI-Driven Threat Detection

Machine learning and behavioral analytics help identify emerging threats and unusual activity patterns.

Seamless Integrations

Integrates with leading security platforms and log sources to enrich visibility and accelerate detection.

Centralized Security Visibility

Aggregates application activity and alerts into a unified monitoring environment for faster analysis.

Proactive Threat Hunting

SOC analysts actively search for hidden threats and suspicious behaviors across monitored applications.

Rapid Deployment

Fast onboarding with minimal disruption to existing environments.

Why Falcon Shield

- Fully managed 24/7 SOC monitoring
- Faster detection of application-level threats
- Reduced operational burden on internal teams
- Improved visibility into user and application activity
- Strengthened protection for cloud and SaaS environments
