

# FALCON NEXT-GEN SIEM MIGRATION PROGRAM

## A Proven 7-Step Framework for Migrating from Legacy SIEM – Without Downtime

Migrating from a legacy SIEM can be complex. Data pipelines, integrations, detection rules, and compliance requirements must all remain intact while security operations continue uninterrupted.

Vijilan Security simplifies this transition with a structured 7-step migration framework designed to ensure zero downtime, optimized performance, and seamless deployment of Falcon Next-Gen SIEM.

### Vijilan's 7-Step SIEM Migration Framework

#### Security Environment Assessment

**1** We evaluate your existing SIEM deployment, including log sources, detection rules, integrations, and operational workflows.

**Outcome:** Clear understanding of your current security architecture and migration scope.

#### Migration Strategy & Planning

**2** Our team builds a tailored migration roadmap aligned with your security priorities, compliance requirements, and operational needs.

**Outcome:** A structured migration plan with defined milestones and timelines.

#### Data Source & Integration Mapping

**3** We map existing log sources and integrations to the Falcon ecosystem to ensure complete telemetry coverage.

**Outcome:** Seamless log ingestion and integration alignment.

#### Detection Rule & Use Case Migration

**4** Existing correlation rules, alerts, and detection use cases are optimized and migrated into the new environment.

**Outcome:** Maintained and improved threat detection capabilities.

#### Parallel Deployment & Validation

**5** The new environment is deployed alongside your legacy SIEM to validate data flow, detections, and performance.

**Outcome:** Verified functionality with no disruption to ongoing security operations.

#### Cutover & Optimization

**6** Once validated, the environment transitions fully to Falcon Next-Gen SIEM while our team fine-tunes detection logic and performance.

**Outcome:** Smooth platform transition with optimized analytics and response workflows.

#### Continuous Monitoring & SOC Support

**7** After migration, Vijilan provides ongoing monitoring, threat detection, and security optimization through its managed SOC services.

**Outcome:** Stronger protection and improved operational efficiency.

## Benefits of the Vijilan Migration Program

- ✓ Zero-downtime migration approach
- ✓ Optimized detection and response workflows
- ✓ Seamless data ingestion and integrations
- ✓ Reduced operational complexity
- ✓ Faster time-to-value from Falcon Next-Gen SIEM

## Why Organizations Choose Vijilan

Vijilan Security helps organizations successfully modernize their security operations by combining advanced SIEM technology with expert security monitoring and incident response.

Our team ensures every migration is secure, efficient, and fully optimized for long-term threat detection and response.

## START YOUR SIEM MIGRATION WITH CONFIDENCE

Transitioning from a legacy SIEM doesn't have to disrupt your security operations.

Vijilan's proven migration framework ensures a smooth transition to Falcon Next-Gen SIEM with minimal risk and maximum performance.
